

Unavi

Come with us on a fun ride

Our Goal

To develop a GIS application that assists UofT commuters to travel to and from campus

Usability:

A user must achieve a certain goal in the least amount of work possible [1]

Responsiveness:

The speed at which an application responds to an input [2]

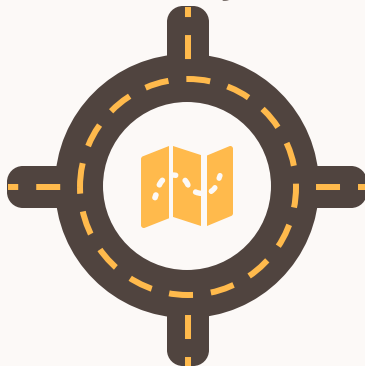

Problems Chad – A Commuter - Faces

Relevant Locations

Too much around to figure out what's significant

Losing Locations

Can't find places you have been before

Train Timing

Arriving to the train at the ideal time

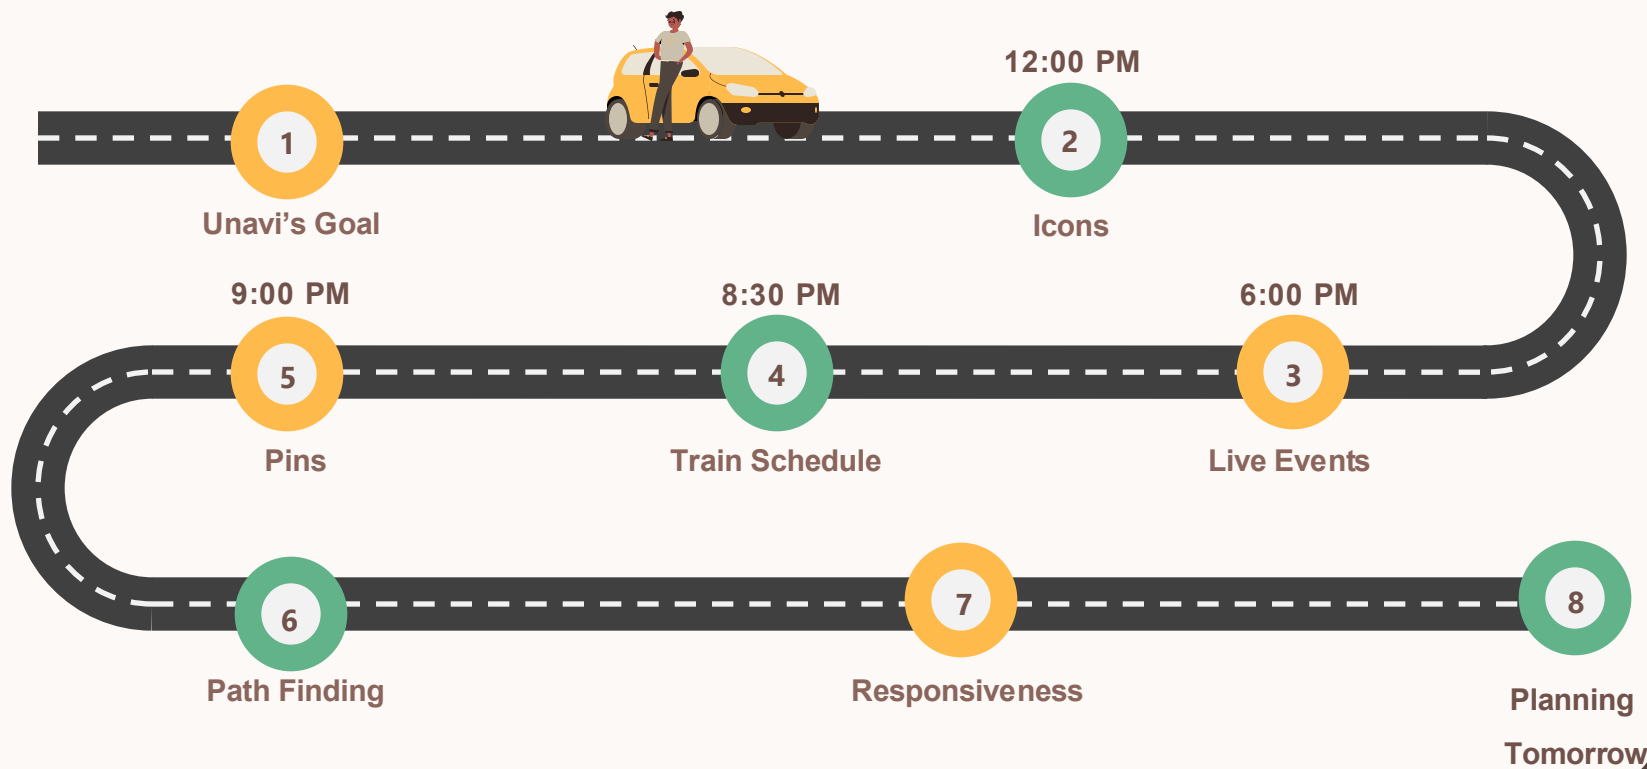

Community

Minimal connection to UofT community

Finding Adding

Title	Outdoor fun!
Message	Friendly football match on front campus. Bring your squad. Everyone is welcomed!
Start	03/15/2024, 05:00 PM
End	03/15/2024, 06:30 PM
Location X	-6384398.849809
Location Y	4856328.188546

Add Event! 

Under the hood

8:30PM

Departing campus

Train shedule

Issue: Too many steps to determine train time!

1

Website

First you have to go to metrolinx' website

2

Enter station

Then enter the station you are departing from and arriving to

3

Filter by time

Finally you enter the time and receive the departing trains

Our approach

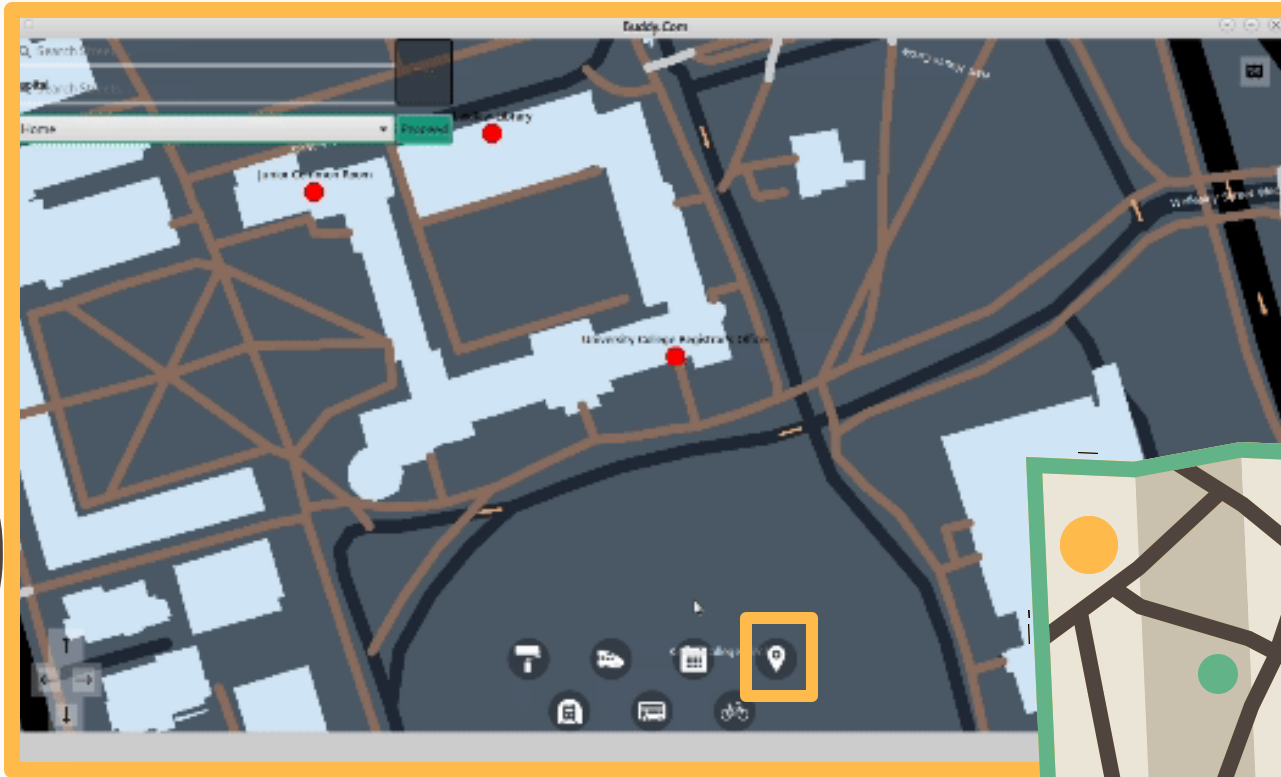

- 2 click effort!
- No external tools needed.
- Only relevant times displayed
- Next available train highlighted

A detailed map of Africa is the background. A red pushpin is stuck into the map, pointing to a location in the central part of the continent, near the border of Nigeria and Cameroon. The map shows various countries, cities, and geographical features. The text '9:00PM' is displayed in a large, black, sans-serif font inside an orange rounded rectangle in the upper left. The text 'Pinning Locations on the Map' is displayed in a green, sans-serif font inside a light beige rounded rectangle in the lower left.

9:00PM

Pinning Locations on the
Map

Pinning your favorite spots

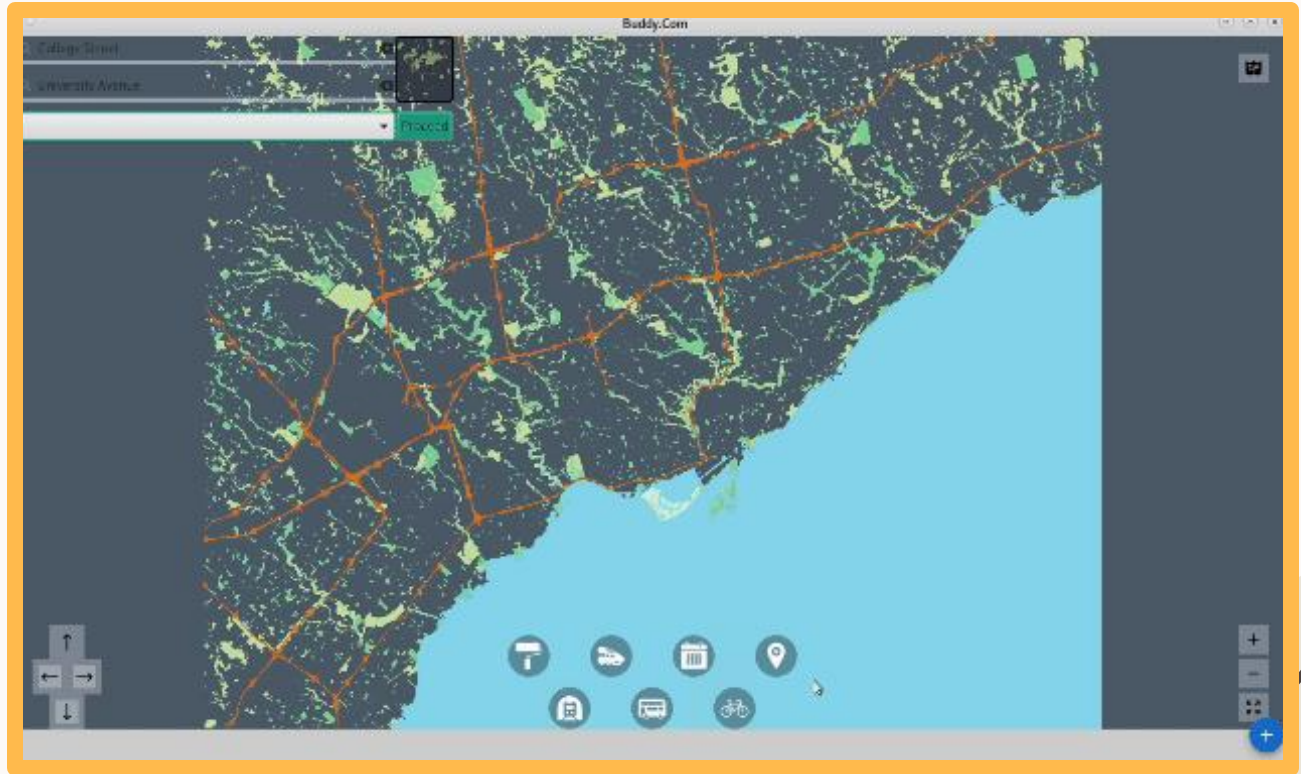

Create and place a pin to anyplace on the map by using the pin button and click anywhere on the map to place the pin on that position.

Pinning your favorite spots

- Find your pre-saved pin to **Go** to your pin
- **Edit** your saved pins
- **Delete** any unused pins

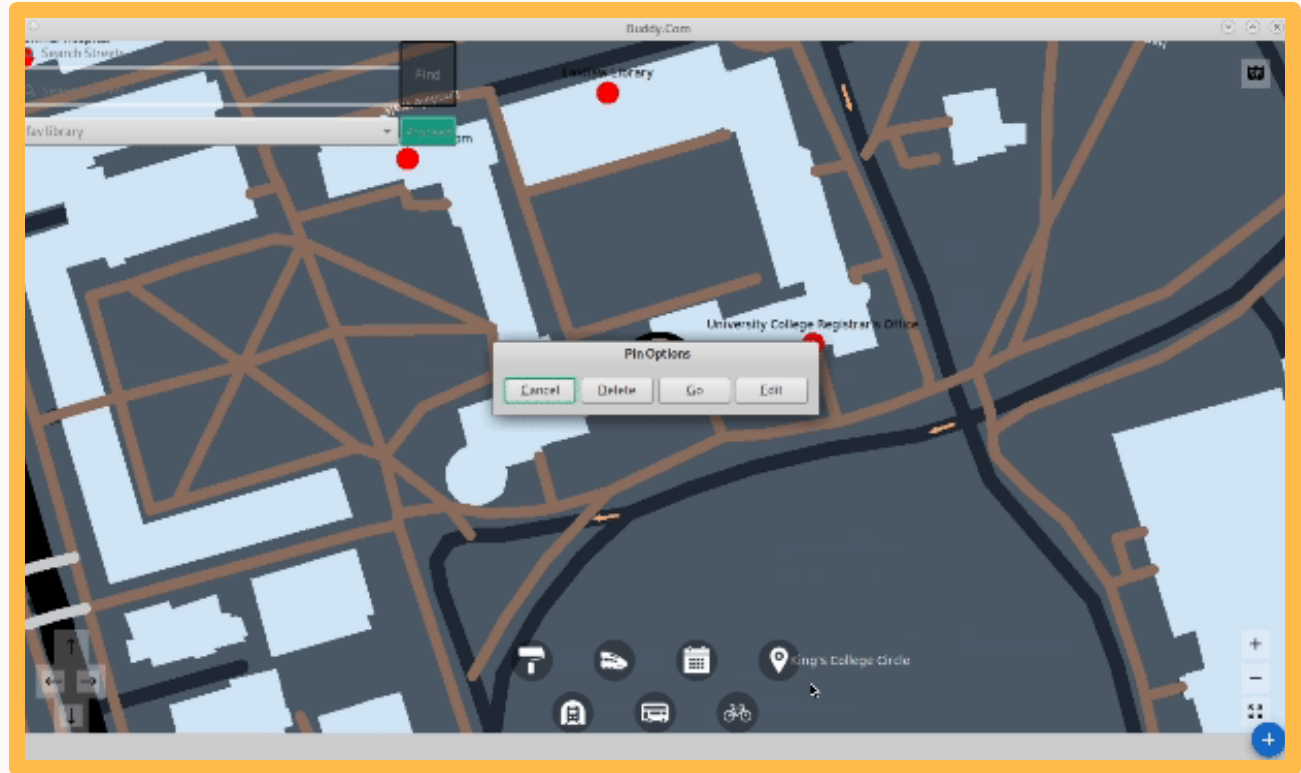

Pinning your favorite spots

- Find your pre-saved pin to **Go** to your pin

User Responsiveness

Increasing Speed ^[3]

Threading

Making the initial
Map load faster

Clipping

Filtering what's on
screen to make
sure only what's
needed is seen

Faster Response time

Render on Zoom

Only draw certain
details of the map
on zoom

Quick Search

Navigate to any
portion of the map
quickly

🔍 Search Bar

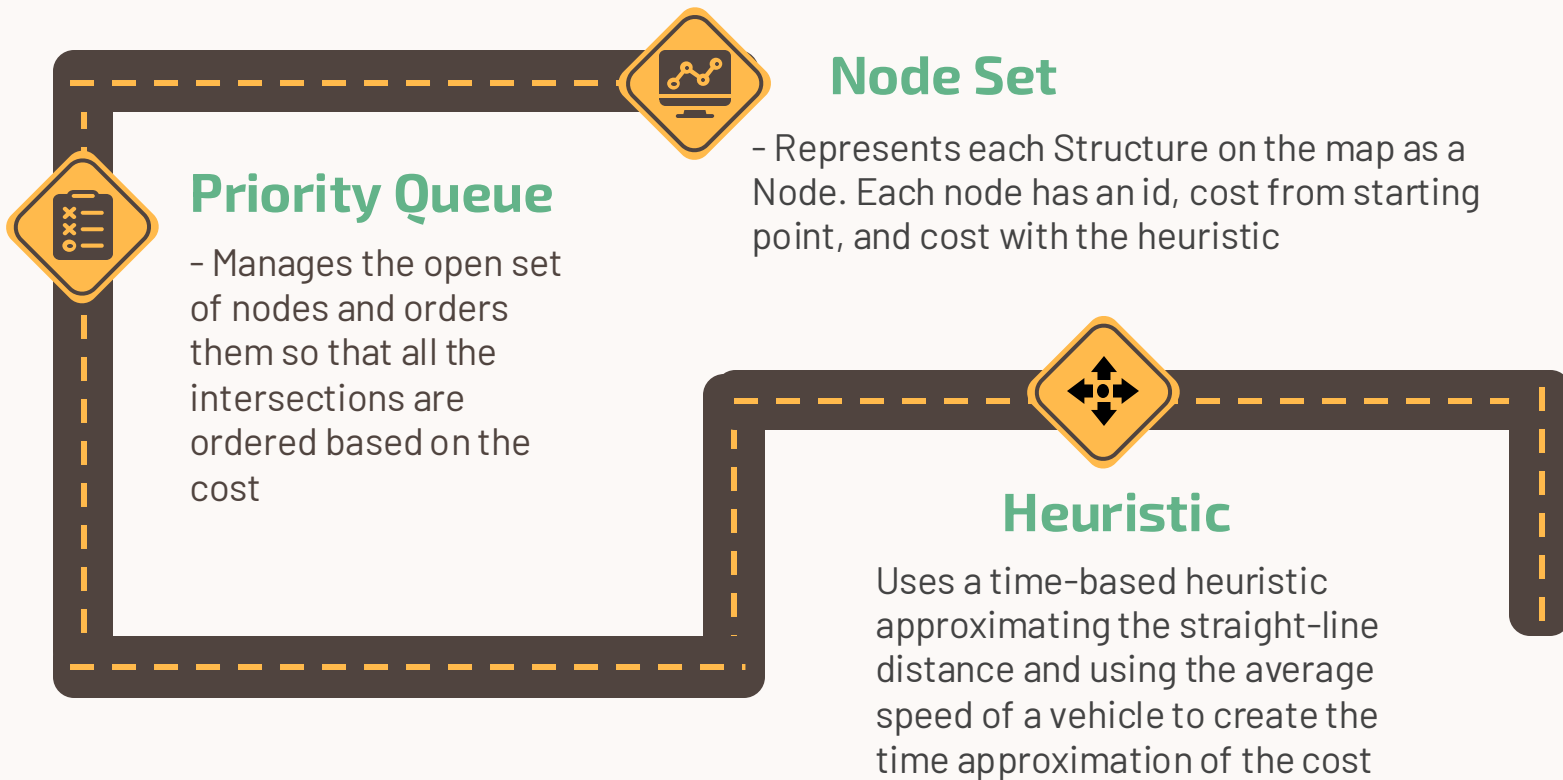

Search for any Intersection on the map using the autocomplete search bar which works even if you don't know the exact full name of what you're looking for

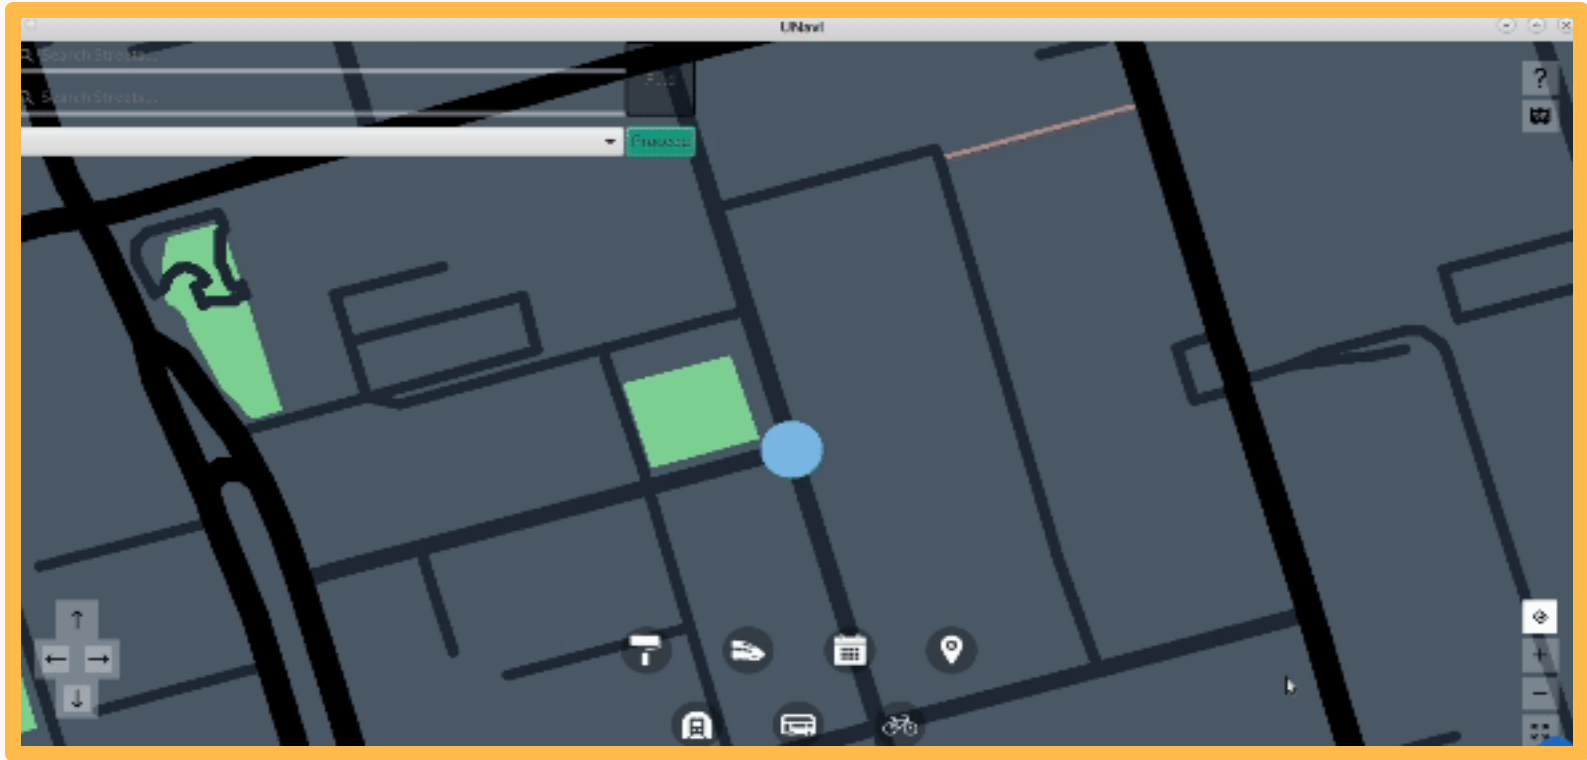

An aerial photograph of a winding asphalt road that snakes through a dense, green forested valley. The road curves from the upper left towards the bottom right. The surrounding landscape is covered in thick vegetation, with rolling hills visible in the background under a clear sky. Decorative white lines are overlaid on the image: a thick, irregular line on the left side and a thinner, more geometric line on the right side.

Path Finding Algorithms

A* Algorithm

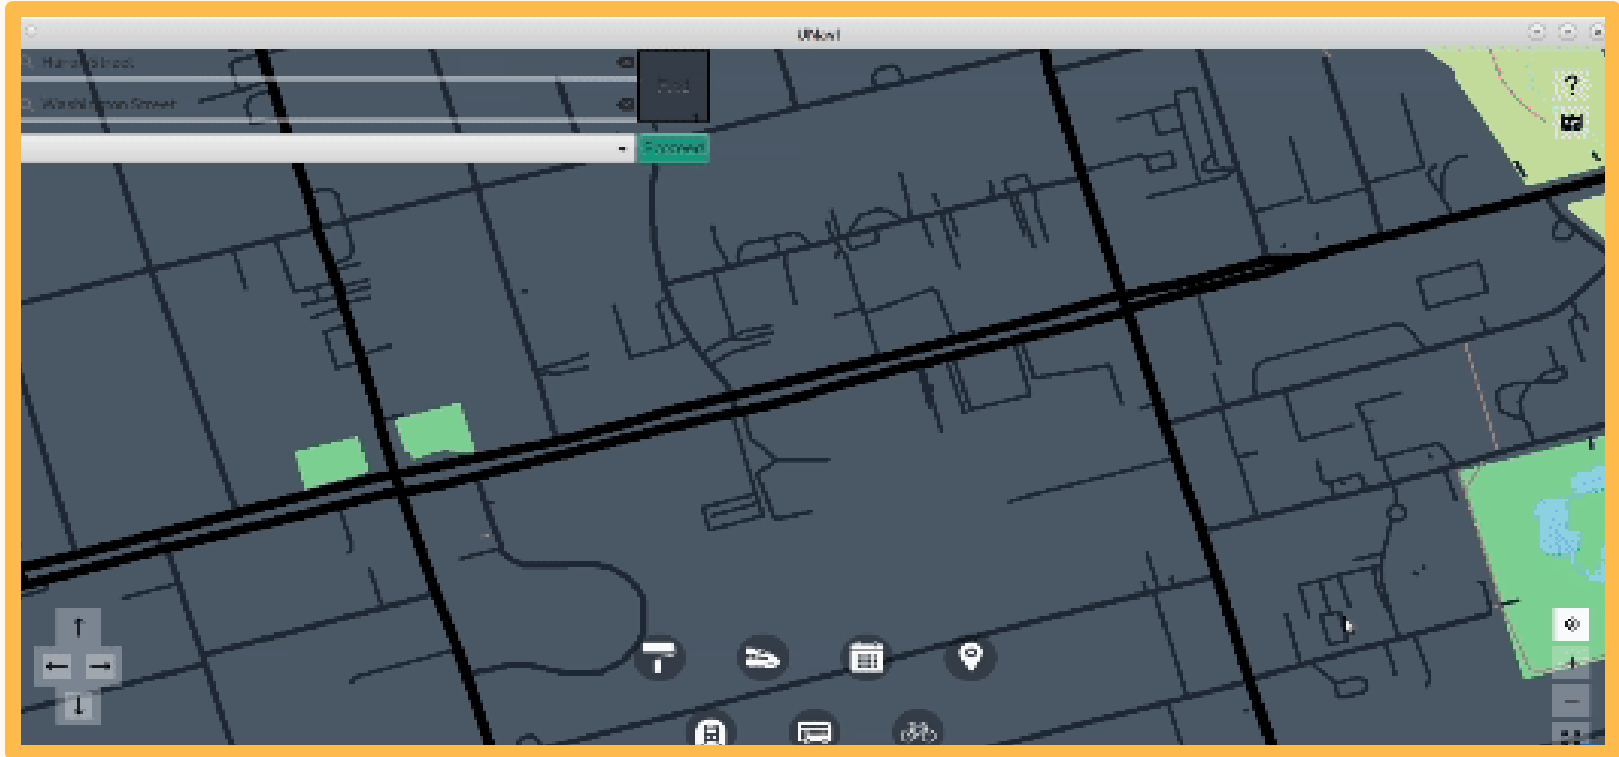

Heuristic A: Walking

Stricter heuristic

More turns

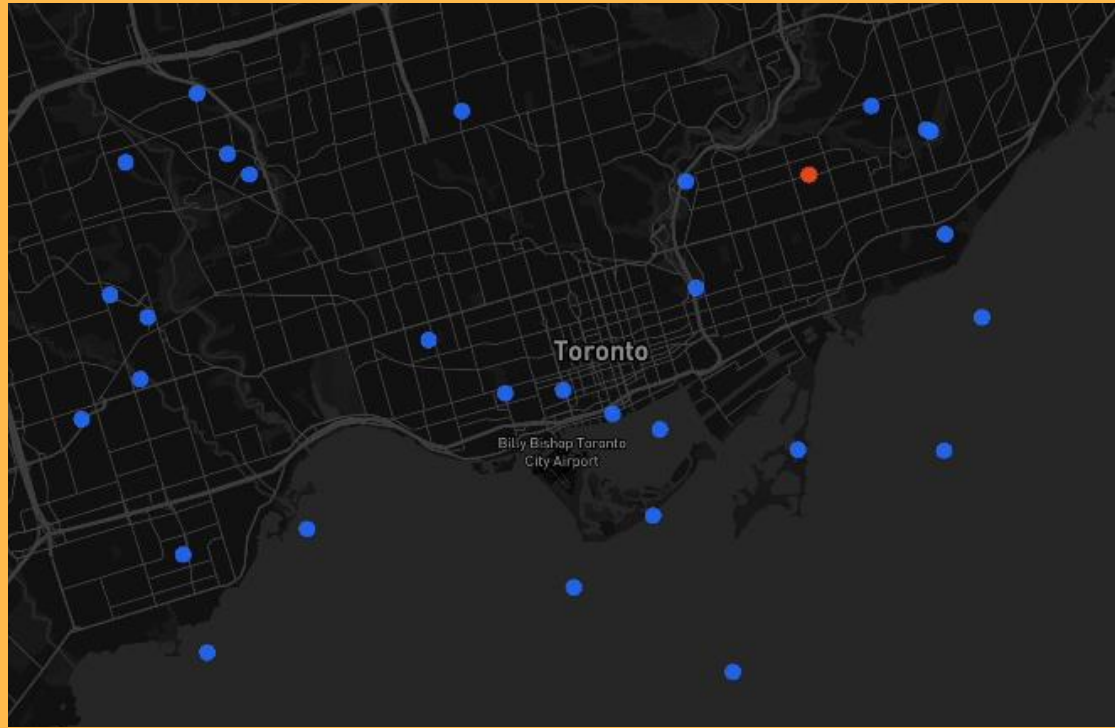

Heuristic B: Driving

Wider Search Area

Fewer Turns

Travelling Courier Problem: Greedy Approach

1

Reuse A* Algorithm to navigate between two points

2

Uses a Greedy Approach to find the nearest valid node

3

Remove heuristic to convert into a multi-dijkstras so that it can populate an adjacency matrix with the distance of every point to each other

Travelling Courier Problem: Simulated Annealing

1

Take best greedy path after running multiple times

2

Run perturbations until timeout or difference in paths is negligible

3

Multiple perturbations:

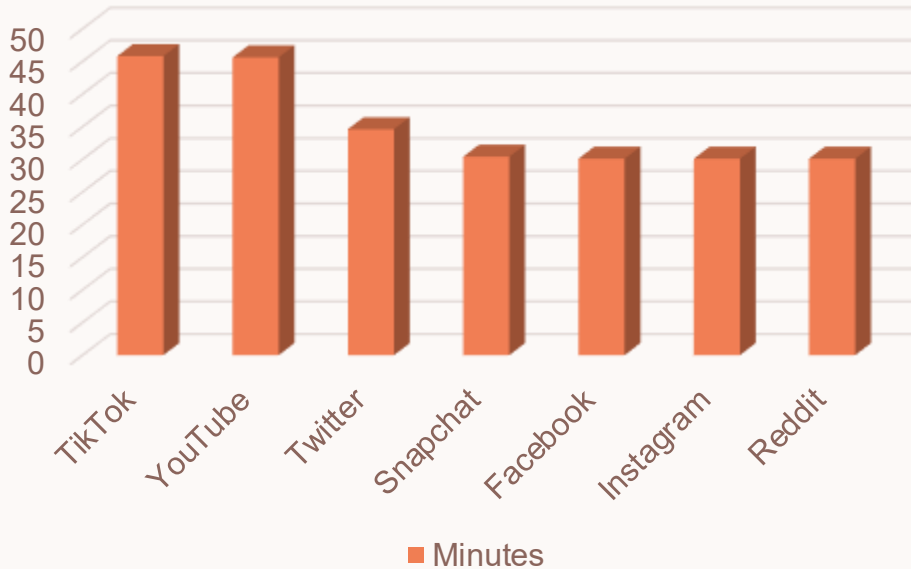

- Shifting
- Reverse
- Swaps

Capturing the GIS Market Shares

Identifying The Gap

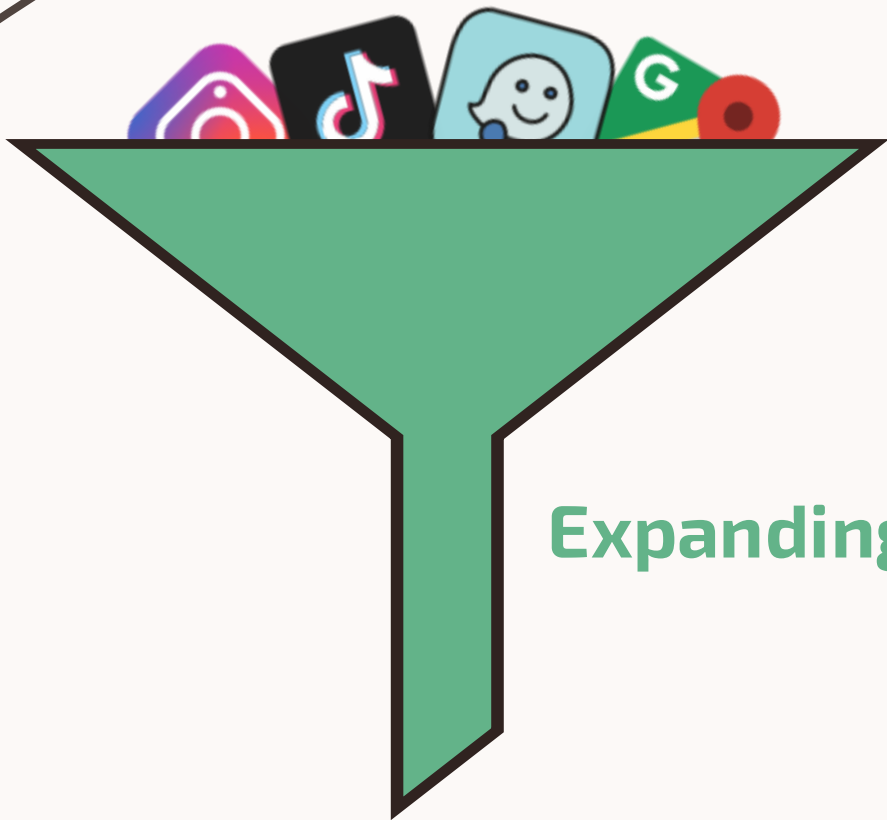

Daily minutes spent per app [5]

No GIS applications!

Problem:

GIS Software are on average single use [6]

Expanding Market to Fill Gap

Study Buddy

Creating and Joining Communities

Interacting with Community Members

Summarizing: Looking back

Community Engagement

Ability to interact with other users using the app

Accurate Pathfinding

Ability to locate things on the map

Responsive UI

Quick and fast response times from the app

Distinct Iconography

Scannable icons

Pinning Locations

Being able to find previously saved locations

Looking Ahead

More Live Event Features

New Event Types, Integration with Pathfinding, Scheduled Events

Communities

Join new communities in the area

Private Events

Implement a security system to ensure only certain users get access to certain features

Live Feed

New Feed for users to post about their day at different locations
